

North of Tyne Area and Gateshead Prescribing Committee

**Dexamfetamine**

**ADHD Shared Care Guideline (Children and Young People)**

<p>Introduction</p>	<p><b>Indication:</b> Dexamfetamine is a CNS stimulant drug used in the treatment of Attention Deficit Hyperactivity Disorder (ADHD) following a comprehensive assessment and diagnosis. Usually second line when other treatments have been inadequate or not tolerated in children over 6 years and young people (licensed use). Use supported by NICE CG 72 guidance and the British National Formulary (BNF).</p> <p><b>Dosage and Administration</b>                  Child 6–17 years initially 2.5 mg 2–3 times daily, increased if necessary in steps of 5mg daily, dose to be increased at weekly intervals; usual max. 1 mg/kg daily, up to 20 mg (40 mg daily has been required in some children)</p> <p>Maintenance dose given in 2–4 divided doses</p> <p><b>Available as:</b> Dexamfetamine 5mg tablets (Dexedrine®) Tablets may be halved                  Dexamfetamine is a schedule 2 controlled drug and is therefore subject to normal controlled drug regulations.</p>
<p>Specialist Responsibilities</p>	<ul style="list-style-type: none"> <li>• Diagnose the condition and assess if the patient is suitable for treatment with dexamfetamine (as per the pre-drug assessment in NICE guidance)</li> <li>• Provide patient/carer with relevant information on use, side effects and need for monitoring of medication</li> <li>• Arrange shared care with the patient’s GP when the patient has received at least 3 months treatment from the specialist team.</li> <li>• Provide the GP with relevant information for each patient, including:                         <ul style="list-style-type: none"> <li>○ Treatment to be undertaken by GP (dose, any dosage titrations etc.)</li> <li>○ System of monitoring and recording of progress and side effects</li> </ul> </li> </ul> <p><b>Monitoring of condition:</b></p> <ul style="list-style-type: none"> <li>• Assess response to treatment and the need to continue therapy by reviewing the patient at regular intervals during initiation and at least annually thereafter</li> <li>• Re-evaluate the need for continued therapy beyond 1 year, particularly when the patient has reached a stable and satisfactory response</li> </ul> <p><b>Monitoring side-effects:</b></p> <ul style="list-style-type: none"> <li>• Appetite, height (not applicable for adults) &amp; weight: Every 6 months</li> <li>• BP &amp; heart rate: Approximately every 3 months as per specialist’s review schedule, and with each dose change</li> <li>• Assess for: development of tics, psychotic symptoms, anxiety, or seizures</li> <li>• Advise discontinuation of dexamfetamine if no improvement in symptoms is seen after a reasonable trial</li> <li>• Review the treatment regularly, sending a written summary to the GP whenever the patient is reviewed</li> <li>• Provide any other advice or information for the GP if required</li> <li>• Inform GP if failing to attend appointments</li> <li>• Supervise any discontinuation of treatment or onward referral to adult service if appropriate.</li> </ul>

<p><b>GP Responsibilities</b></p>	<ul style="list-style-type: none"> <li>• Prescribe dexamfetamine- it is strongly recommended that prescriptions are issued for maximum treatment duration of one month, in line with good practice guidance for controlled drug prescribing.</li> <li>• Report significant deviations from the prescribing pattern to the specialist</li> <li>• Monitor and record the therapy in accordance with written directions of specialist</li> <li>• Report any adverse events to the specialist, and the usual bodies (e.g. MHRA).</li> <li>• Contact specialist if concerned about any aspects of the patient's treatment e.g. Failure to collect prescriptions</li> </ul>								
<p><b>Adverse Effects, Precautions, Contraindications</b></p>	<p><b>Contraindicated</b> in patients with:</p> <table border="1" data-bbox="416 488 1497 860"> <tr> <td data-bbox="416 488 959 600">Known intolerance of sympathomimetic amines</td> <td data-bbox="959 488 1497 600">Marked anxiety, agitation, tension or psychosis</td> </tr> <tr> <td data-bbox="416 600 959 667">Glaucoma.</td> <td data-bbox="959 600 1497 667">Hyperthyroidism</td> </tr> <tr> <td data-bbox="416 667 959 768">*Cardiovascular disease – including hypertension</td> <td data-bbox="959 667 1497 768">Current or recent (within 14 days) treatment with MAOI's</td> </tr> <tr> <td data-bbox="416 768 959 860">* Motor tics, or family history of Tourette's syndrome</td> <td data-bbox="959 768 1497 860">History of drug or alcohol abuse Structural cardiac abnormalities</td> </tr> </table> <p>* Although these two are listed as contraindications, in some circumstances, dexamfetamine can be used with caution and careful monitoring by the specialist.</p> <ul style="list-style-type: none"> <li>• Use with caution in epilepsy. If seizure frequency increases, the specialist should discontinue dexamfetamine</li> <li>• Use with caution in renal impairment</li> <li>• Dizziness, nervousness, drowsiness and headaches are commonly experienced upon initiation of therapy. Loss of appetite (some weight loss may occur) and insomnia may also occur. These effects are often mild and transient and may be controlled by a reduction in dose</li> <li>• Other adverse effects include: abdominal pain, nausea and vomiting (can be alleviated with concomitant food intake), dry mouth, emotional lability, temporary growth retardation, changes in blood pressure and heart rate, tachycardia, palpitations, skin rash, itching or bruising.</li> <li>• Ability to drive safely may be impaired – warn relevant patients</li> </ul>	Known intolerance of sympathomimetic amines	Marked anxiety, agitation, tension or psychosis	Glaucoma.	Hyperthyroidism	*Cardiovascular disease – including hypertension	Current or recent (within 14 days) treatment with MAOI's	* Motor tics, or family history of Tourette's syndrome	History of drug or alcohol abuse Structural cardiac abnormalities
Known intolerance of sympathomimetic amines	Marked anxiety, agitation, tension or psychosis								
Glaucoma.	Hyperthyroidism								
*Cardiovascular disease – including hypertension	Current or recent (within 14 days) treatment with MAOI's								
* Motor tics, or family history of Tourette's syndrome	History of drug or alcohol abuse Structural cardiac abnormalities								
<p><b>Common Drug Interactions</b></p>	<ul style="list-style-type: none"> <li>• Effect of dexamfetamine can be decreased by: beta-blockers (e.g. propranolol), lithium and phenothiazines</li> <li>• Concurrent use of beta-blockers may result in severe hypertension</li> <li>• Concurrent use of tricyclic antidepressants may increase risk of cardiovascular side effects</li> <li>• Concurrent (or recent) use of MAOI's may precipitate hypertensive crisis</li> <li>• Acute dystonia has been noted with concurrent administration of haloperidol.</li> </ul>
